

ATTORNEY'S DOCKET NO. TN 222/USYS-0083  
AMENDMENT

SERIAL NO. 09/702,224

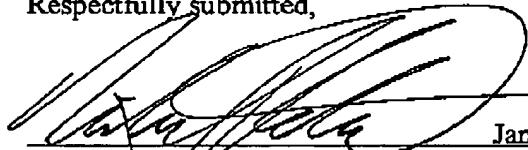

REMARKS

The Comerford reference appears to be directed to managing a user interface for interaction with a computer system, instead of for managing the programming of instances of a user interface, to which the invention is directed. The modification of the claims should make this clear by adding the limitation to a programmer-defined set of information of the kind already specified by the claims which information will enable the specific conversation flow that the programmer has defined.

It is believed that with the clarifying amendment provided herewith that the claims should be allowable.

The applicant therefore respectfully requests this Application be allowed and passed to issue.

Respectfully submitted,

January 7, 2004

Michael B. Attass
